DETAILED ACTION

1. In response to the Appeal Brief filed on 09/17/2010, the action follows:

Allowable Subject Matter

2. **Claims 1, 5-14, and 17-21** are allowed. The claims will be renumbered as 1-16.

3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding **claim 1**, Honma (USPN 6,002,845) discloses: quantizing the binary image data with n bits, wherein $n > 1$; and filtering the quantized image data with a low-pass filter having a filter window smaller than a screen cell (see Honma column lines 43-54, converting one bit-data into 8-bit data, converting the 8-bit data to binary data again and averaging nearby pixels).

The applicant argues that Honma fails to disclose “quantizing the binary image data with n bits, wherein $n > 1$; and filtering the quantized image data with a low-pass filter having a filter window smaller than a screen cell” specifically because Honma converts the 8-bit data to binary data again, however, the examiner respectfully disagrees since applicant's claim 1 is using an open ended connecting phrase “comprising” which does not preclude the reference from having additional features, i.e. converting the 8-bit data to binary data again.

Honma and Gindele (USPN 6,907,144) fail to disclose: providing the low-pass filter with an asymmetrical distribution of filter coefficients with respect to the

filter window; and obtaining the asymmetrical distribution of the filter coefficients from a symmetrical filter by shifting a filter function by fractions of an image point, said fractions being less than 1, and obtaining further coefficients for the asymmetrical distribution by using the same filter function as used for obtaining symmetrical distributions.

Rather, Gindele discloses an asymmetrical distribution of pixel patterns with respect to the filter window in figure 10, which is a shifted version of figure 8 by fractions of an image point ("image point" is not defined in applicant's claim and in this case, the filter window 16 is considered the image point).

Applicant's arguments with respect to Gindele's filter being a distribution of pixel patterns rather than filter coefficients are persuasive, and the rejection under 35 U.S.C. 103(a) of claim 1 has been withdrawn.

The above also applies to **claims 5 and 14**.

4. Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to SOO JIN PARK whose telephone number is

(571)270-3569. The examiner can normally be reached on M-F 10:00am-5:00pm ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, VU LE can be reached on (571)272-7332. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
